Low-Power Embedded Systems - WiSe 2025/26

Project Registration Form

Instructions: Fill in and submit this form to register your project.

Project Name:

List of the participants:

Student Name	Matriculation Number
--------------	----------------------

Hardware to use:

List the hardware devices planned for use in the project. Provide details such as the device name, type, quantity, and software support.

Device Name	Hardware Type	Quantity	Support/Drivers
<hr/>			

Existing Software to use:

List any pre-existing software or libraries you plan to leverage for your project. Include the name and describe the functionalities.

Software Name	Functionalities
<hr/>	

Project Functionalities Description

Describe the project idea, what you will implement and what are the expected results. Examples of project ideas include sensor applications with an RTOS, or developing a specific subsystem with a clearly defined input and output interface.

Work packages to be developed

Outline the specific work packages to be developed. They should describe the steps necessary to implement the project idea and all the functionalities described in the previous textbox.
